# First Steps

## Style Files and Options

Make the following style files accessible for Latex: (via texmf tree, same directory)

```
lecture.cls  
size17r.clo  
expandonce_sauer.sty
```

Optional arguments for lecture.cls: (default in blue)

```
{ latin1, utf8 } { nimbus, texgyre } { american, german }  
{ 1:1, 5:4, 9:7, 4:3, 17:12, 3:2, 8:5, 16:9 } legacy
```

## Remarks (slide commands) :

- ❑ Aside from the listed commands, `lecture.cls` does not introduce additional commands for rendering slide content. The philosophy is to leave maximum (Latex) freedom for the slide author, and not to to predefine commands for a “semantic slide layer”.
- ❑ A convention is that additional commands should be defined at the frame-file-level. In this regard, an existing style file `FRAME_FILE_NAME.sty` is automatically loaded.

For this part (Style Guide) the name of the style file is `part-en-styleguide.sty`.

## Your Latex Code is Read by Others

- ❑ SPSS. “Same Problem, Same Solution”  
Create the same effects always in the same way.
- ❑ ROC. “Remove or Comment”  
Remove unused slide content or provide an explaining comment why you keep it as comment. The code should present itself to third parties as clean and tidy as possible.

- ❑ Classify explicitly the type of comment:

```
%%% NOTES. (<ABOUT>)  
%%%  
%%% <EXPLANATORY TEXT>  
  
%%% ADDITIONS.  
%%% SOURCES.  
%%% TODO.
```

- ❑ Comments may be placed outside or inside the `bslide` environment.
- ❑ Exclamation marks (also in comments) are taboo.

## Some Debugging

- ❑ If font size `\small` (or other) is used for a text passage, the font switch back to `\normalsize` (which happens at the latest with `\end{bsslide}`) will cause the last line of the passage being typeset with `\normalsize` baseline skip. This undesired behavior is avoided if the passage is closed with a `\par`.
- ❑ Math environment. Put `\\` after the closing `$$` (or `\]`) to suppress vertical adjustments.
- ❑ German text. Use `"=` instead of `–` in hyphenated words to enable automatic hyphenation in `\raggedright` mode (default).
- ❑ Output messages from within Latex via `\message{<LATEX>}` or `\typeout{<LATEX>}`.

Example: `\message{^^J Page: \thepage ^^J^^J}`  
`\typeout{Page: \thepage}`
