## The Infinite Index: Information Retrieval on Generative Text-To-Image Models

#### **CHIIR 2023**

Niklas Deckers

Maik Fröbe

Johannes Kiesel

Gianluca Pandolfo

Christopher Schröder

Benno Stein

Martin Potthast

## **Recent Advancements in Image Generation**

Generate images, but conditioned on a user-defined text, the prompt

a beautiful sunset over the texan landscape

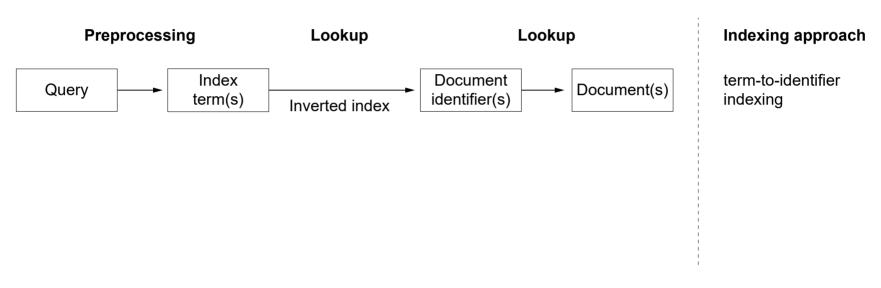

## **Recent Advancements in Image Generation**

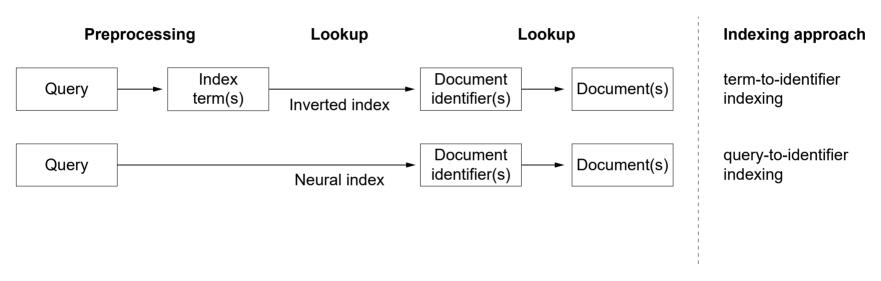

Generate images, but conditioned on a user-defined text, the prompt

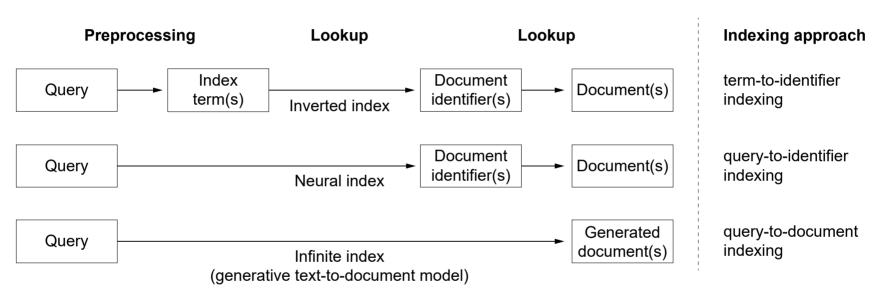

a beautiful sunset over the texan landscape

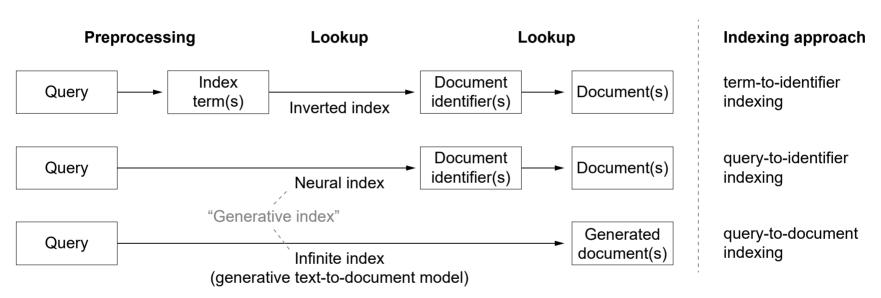

Name	Parameters	Month / Year
DALL·E (OpenAl)	12 B	01 / 2021
DALL·E 2 (OpenAI)	3.5 B	04 / 2022
Imagen (Google)	4.6 B	05 / 2022
Midjourney	n/a	07 / 2022
Stable Diffusion (Stability	AI) 0.9 B	08 / 2022

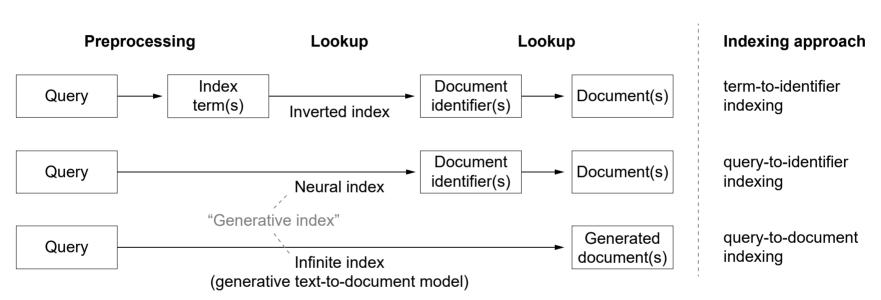

# See image generation with a prompt as image retrieval with a query, but on an infinite index

Recent examples: Bing, YouChat, NeevaAl

- □ Every query yields (some) results
- □ For each query, there exist infinitely many possible results with different random seeds

- □ Every query yields (some) results
- □ For each query, there exist infinitely many possible results with different random seeds

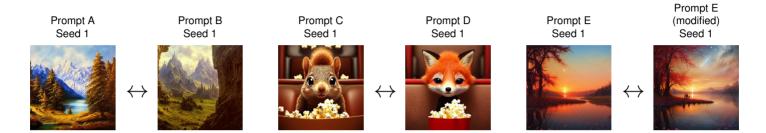

Golden treehouse in lush forest, better homes and hardens magazine, big glass windows, intricate woodworking, polaroid ethiopian landscape, highly detailed, digital painting, concept art, sharp focus, cinematic lighting, diffuse lighting, fantasy, intricate, elegant, lifelike, photorealistic, illustration, smooth a cybernetic samoyed and beagle, concept art, detailed face and body, detailled decor, fantasy, highly detailed, cinematic lighting, digital art painting, winter, nature, running

Prompt embedding space is continuous
 and allows for approaches like gradient descent

#### Prompt embedding space is continuous

and allows for approaches like gradient descent

beautiful mountain landscape, lake, snow, oil painting 8  $\ensuremath{k}$  hd interpolated to

a beautiful and highly detailed matte painting of the epic mountains of avalon, intricate details, epic scale, insanely complex, 8 k, sharp focus, hyperrealism, very realistic, by caspar friedrich, albert bierstadt, james gurney, brian froud,

Cute small squirrel sitting in a movie theater eating popcorn watching a movie ,unreal engine, cozy indoor lighting, artstation, detailed, digital painting, cinematic, character design by mark ryden and pixar and hayao miyazaki, unreal 5, daz, hyperrealistic, octane render

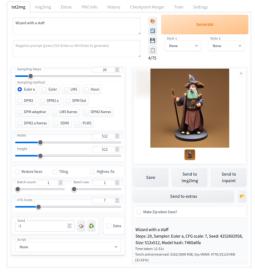

#### interpolated to

Cute small fox sitting [...]

## **Related Information Retrieval Concepts**

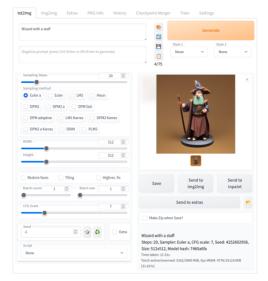

- Image retrieval including reverse image search
  - Query-to-image as image generation
  - Image-to-image including inpainting
- Retrieval for creative tasks
- Interactive retrieval
  - Query reformulation
  - Query log analysis
  - Query suggestion

(a) Prompting in a community-maintained Stable Diffusion web interface

(a)

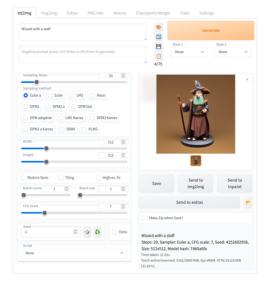

- (a) Prompting in a community-maintained Stable Diffusion web interface
- (b) Lexica search engine for generated images along their prompts

(a)

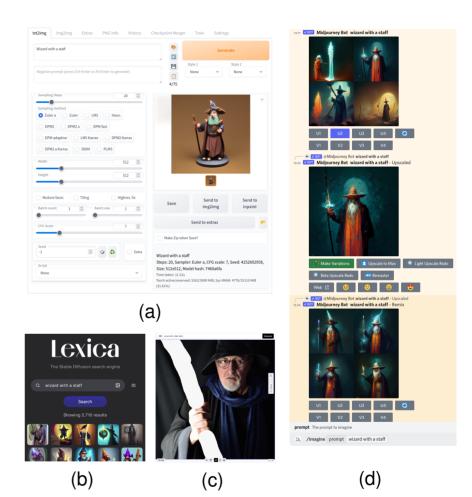

- (a) Prompting in a community-maintained Stable Diffusion web interface
- (b) Lexica search engine for generated images along their prompts
- (c) In-painting in DALL.E 2

(a)

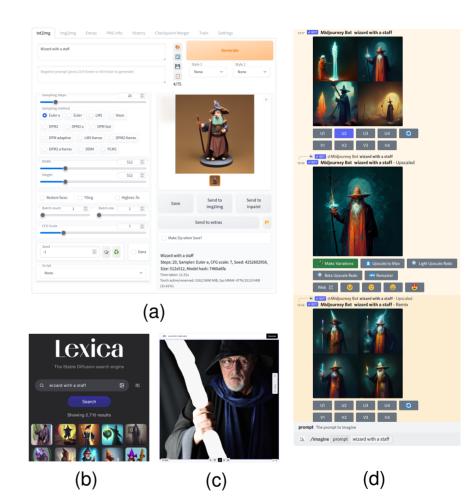

- (a) Prompting in a community-maintained Stable Diffusion web interface
- (b) Lexica search engine for generated images along their prompts
- (c) In-painting in DALL.E 2
- (d) Upscaling and variation generation in Midjourney

- (a) Prompting in a community-maintained Stable Diffusion web interface
- (b) Lexica search engine for generated images along their prompts
- (c) In-painting in DALL·E 2
- (d) Upscaling and variation generation in Midjourney

Equivalent to search interfaces

 Result relevance depends on the information needs of users as with regular image retrieval

□ Descriptive approach:

□ Creative approach:

- Result relevance depends on the information needs of users as with regular image retrieval
- Descriptive approach:
  - The user has an idea of a fixed target image
  - Generates image that approximates their ideas
- Creative approach:

- Result relevance depends on the information needs of users as with regular image retrieval
- Descriptive approach:
  - The user has an idea of a fixed target image
  - Generates image that approximates their ideas
- Creative approach:
  - The user has no clear vision or goal, but a set of constraints
  - Iteratively refines their prompt in a feedback-loop with random elements introduced by the system

- Result relevance depends on the information needs of users as with regular image retrieval
- Descriptive approach:
  - The user has an idea of a fixed target image
  - Generates image that approximates their ideas
- Creative approach:
  - The user has no clear vision or goal, but a set of constraints
  - Iteratively refines their prompt in a feedback-loop with random elements introduced by the system
- Similar behavior in terms of query log analysis
  a general prompt is extended with details to become more specific

## Relevance in Text-To-Image Generation

- Current approach to measure relevance:
  Users click a like button for good images
  but that does not generalize well for unseen prompts
- Model user intent just by looking at the prompt? Initiative is entirely with the user
- Retrieval methods such as query suggestions can be transferred from information retrieval to text-to-image model generation and retrieval evaluation measures can be adopted

## **Evaluating Retrieval on Text-To-Image Models**

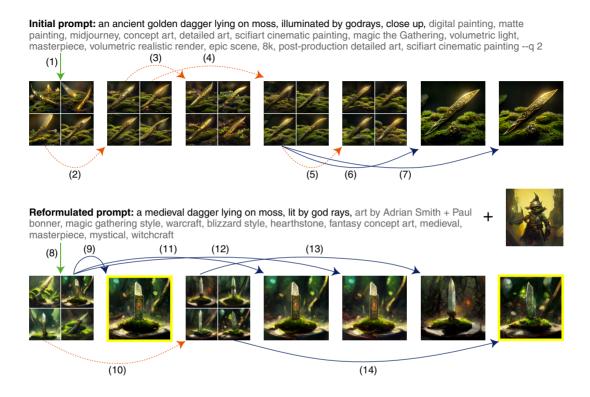

#### Problems with the Infinite Index:

- Unending stream of alternative generated images leads to problems with recall-oriented evaluation measures and requires sampling
- Near duplicates with high relevance can be generated and thus evaluation requires deduplication

## **Case Study: Game Artwork Search**

Initial prompt: an ancient golden dagger lying on moss, illuminated by godrays, close up, digital painting, matte painting, midjourney, concept art, detailed art, scifiart cinematic painting, magic the Gathering, volumetric light, masterpiece, volumetric realistic render, epic scene, 8k, post-production detailed art, scifiart cinematic painting -- q 2 (2) (5) (6) (7) **Reformulated prompt:** a medieval dagger lying on moss, lit by god rays, art by Adrian Smith + Paul bonner, magic gathering style, warcraft, blizzard style, hearthstone, fantasy concept art, medieval, masterpiece, mystical, witchcraft (13)(10)(14)

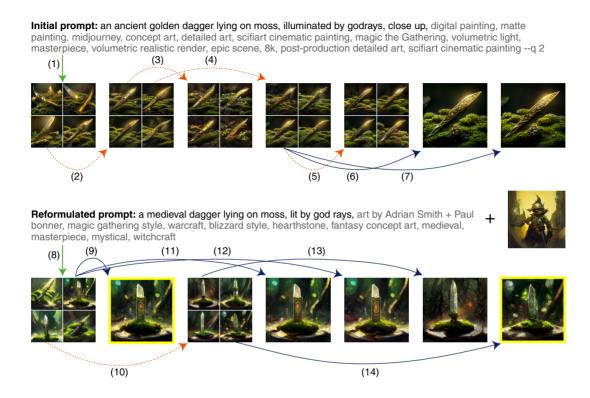

## Case Study: Game Artwork Search

#### Central findings:

- Uncertainty never fully ceases
- Sense of direction, but lack of control

## Case Study: Game Artwork Search

#### Central findings:

- Uncertainty never fully ceases
- Sense of direction, but lack of control

#### Prompt engineering forms a central limitation in current approaches

## **Outlook: Supporting the User to Navigate the Infinite Index**

- Given prompt templates as a source of inspiration
- More modalities (depth maps, segmentation maps) for more precise control in the image space
- Interactive gradient-based methods to modify the prompts using active learning
- Generalization of these concepts to text-to-text domains

## **Outlook: Supporting the User to Navigate the Infinite Index**

- Given prompt templates as a source of inspiration
- More modalities (depth maps, segmentation maps) for more precise control in the image space
- Interactive gradient-based methods to modify the prompts using active learning
- Generalization of these concepts to text-to-text domains

Thank you!

## **Backup: Interpolating Seeds**
